Malwarebytes Breach Remediation is a malware endpoint detection and removal tool designed to help IT administrators scan all Windows endpoints and removable devices for suspicious programs and remove them, without leaving a trace. It employs advanced heuristics and active detection methods to determine what constitutes as malicious software. Malwarebytes Breach Remediation utilizes two main detection modules in its scanning engine: the Anti-Exploit module and the Malwarebytes Anti-Exploit module. The Anti-Exploit module is designed to detect zero-day exploits and evasion techniques. These two detection modules are capable of finding an unlimited number of exploits and evasion techniques. However, due to resource allocation and processing speed issues, only the Anti-Exploit and Malwarebytes Anti-Exploit modules are capable of finding an unlimited number of exploits and evasion techniques. Malwarebytes Breach Remediation is a web-based breach detection and remediation solution. It provides enterprise-level security for your organization's endpoint. It is composed of a collection of standard Antivirus engine components, but what really sets it apart is the possibility to customize it with different intrusion detection and removal engines and behavioral detection policies. The built-in compliance engine scans every file and folder to find and report any technical or behavioral indicators. A breach can be detected in real time and blocked by keeping it separate, so that it cannot affect the rest of your system. Malwarebytes Breach Remediation allows you to have any number of remediation engines from other vendors (such as Fidelis, Lastline and Maniant), to augment its capabilities. It has two user interfaces or in-depth and real-time analysis. The application allows you to add exception lists (only allow some applications, groups, or processes to use the scanner), exclude folders or files from the scan, and create dynamic detection policies and remediation engines. Malwarebytes Breach Remediation Screenshots: Users can receive alerts about possible security breaches from a web browser, smart phone, or other endpoint. This information is important because it allows your organization to react fast and take control of what is happening, avoiding disruptions to your business. You can also schedule daily scans for when you want to do them. Scans are also analyzed on a weekly basis, and a report is generated with the findings. When Malwarebytes Breach Remediation detected indicators and are to react any file or the quarantine. Alternatively, the user can decide to ignore the file. After the scanning is finished, user can explore the content of the quarantine and restore any file with ease. Users can also explore the detected indicators and are to react or the system.
